**MUTE STAND-BY FUNCTION**

The pin 5 (MUTE/STAND-BY) controls the amplifier status by two different thresholds, referred to  $+V_S$ .

- When  $V_{pin5}$  higher than  $= +V_S - 2.5V$  the amplifier is in Stand-by mode and the final stage generators are off
- when  $V_{pin5}$  is between  $+V_S - 2.5V$  and  $+V_S - 6V$  the final stage current generators are switched on and the amplifier is in mute mode
- when  $V_{pin5}$  is lower than  $+V_S - 6V$  the amplifier is play mode.
